## Winch Drive

### Main & Auxiliary Winch for ARV-VT-72B

**We manufacture the drive with following  
Specification:  
30 Tonne Winch Drives for Armor Recovery Tanks  
VT-72B-ARV**

The main winch construction with its towing force and the rope strength enables light and medium recovery of sunken vehicles and equipment by direct traction force of 300 kN and within distance of 200 m. To recovery sunken vehicles at longer distances and especially from water streams, VT-72B is equipped with an additional traction reel towing rope set.

For heavy and very heavy recovery, VT-72B has a bulldozer blade, set of rope connecting parts, guys and pulleys. To make handling with towing rope easier, an auxiliary winch is used. The main winch traction rope is led forward from the recovery vehicle. This enables to use the bulldozer blade as a guy for heavy recovery and in addition to that it offers the increased armoured protection of vehicle.
